HOW TO CHOOSE THE RIGHT PRODUCT

HOW TO CHOOSE:

the Right Liner Material for Your Specific Needs

Low Density Polyethylene - Industry favorite for everyday packaging needs. Low density material provides good clarity. Ideal for packaging small parts. Linear Low Density Polyethylene - Lighter and lower cost than standard low density liners, gauge can be cut up to 30%. Material provides improved stretch and puncture resistance for heavier items.

High Density Polyethylene - Extremely lightweight, star-sealed liners provide the strength of low density liners at savings in weight of 50% and cost of up to 65%. High density material is also an excellent moisture barrier.

Metallocene - Higher stretch and strength allows for a gauge reduction of 25% and a cost savings of 10% compared to low density liners. The metallocene formulation greatly improves both clarity and puncture resistance.

Titanium - High-stretch, ultra-strong material allows for reducing gauge without sacrificing performance. Opaque material combines maximum puncture resistance with a tough, star-sealed bottom for your heaviest loads.

The Best Bag for your Specific Needs

1 mil - Used for dust protection, small parts stationery, and box liners

1.5 mil - Used for moisture protection; manuals, clothing, snacks, candy, other food items, and box liners.

2 mil - Used for protecting parts, supplies, lightweight items, clothing food and box liners.

3 mil - Used for medium weight items; hardware, electrical, and plumbing supplies; mattress covers.

4 mil - Used for bulky items or items requiring added strength; bolts, screws, and industrial parts.

5 mil - Used for items that require heavy-duty protection; hardware, construction waste, sharp-edged objects.

6 mil - Used for items requiring extra heavy-duty protection; sharp-edged objects and industrial parts.

8 mil - Used for heavier, bulkier items requiring maximum strength bag; industrial parts, gears, and heavy metal objects

the Right Strength for High Density Bags

.5 mil - equivalent to 1.5 mil conventional poly bag. Ideal for food packaging, scratch protection.

.75 mil - equivalent to 2 mil conventional poly bag. Use to package foods, garments

1 mil - equivalent to 3 mil conventional poly bag. Perfect for plastic and electrical parts.

2 mil - equivalent to 5 mil conventional poly bag. Great for heavier items

the Zipper Bag that's Right for your Application

We offer a variety of zipper bag styles to meet your packaging requirements.

Our Own Brand - Top quality bag that's value priced

Minigrip - Premium brand-name bag with trademarked red line.

Polypropylene - Superior clarity for visual impact.

Write-on - White Write-on area is perfect for labeling contents.

Colored - Differentiate products, components

Static Protection - Anti-Static, humidity independent, and static shielding

Anti-Rust (VCI) - Protects contents from oxidation, rust, and And Many More!

We also carry slider zipper, sandwich size, press-on, vinyl, tamper-evident.

the Right Stretch Wrap for Your Specific Needs

Blown

- Super-strong cling characteristics
- Resists punctures and tears
- Stores well long-term and in cold temperatures
- Stiffer than cast films and ideal for irregular loads

Cast

- High clarity for easy product identification
- Stretchable and puncture resistant
- Excellent cling characteristics
- Easy quiet release from roll

Choose The Best Tape Mil Thickness For Your Package

1.5 - 1.65 mil / 0 - 20 lbs • 1.85 - 1.95 mil / 20 - 35 lbs • 2.0 - 2.3 mil / 35 - 50 lbs

2.5 - 2.6 mil / 50 - 65 lbs • 3.0 - 3.1 mil / 65 - 90 lbs
